UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

FOREWORD

The Nevada State ASC Committee each year publishes this summary of ASCS farm activities in Nevada. ASCS programs play an important role in Nevada's and our nation's agriculture by helping to conserve our soil and water resources for future generations, provide the increased agricultural income, and assisting to stabilize consumer food prices.

Statistical data and narratives contained in this report cover all ASCS farm programs for the 1969 program year. This summary is published for the benefit of all persons and organizations interested in the advancement of Nevada agriculture.

The Nevada State ASC Committee commends our ASC county committeemen for their effective administration of ASCS farm programs. Special recognition and a word of thanks is in order for the county executive directors and general program assistants, and other county employees for their effective and courteous service to Nevada farmers and ranchers.

COUNTY COMMITTEE ELECTIONS

All Nevada counties are considered one-community counties. The community committee elected becomes the county committee. In Nevada all elections were conducted by mail ballot. The committeemen elected took office at the beginning of the calendar year. The nominee who received the greatest number of votes was elected as a regular committeemen for a three-year term of office. The next two nominees receiving the second and third largest number of votes were elected alternate committeemen for the year. Usually two members of the committee are carried over as members of the regular committee for one or two years depending upon the years remaining in their term of office. At an organizational meeting, the county committee determined the chairman, vice chairman and member of the committee.

Following is a list of the Nevada ASC county committeemen elected in 1969 and the locations of ASCS offices.

CHURCHILL COUNTY ASCS OFFICE

Federal Building
P. O. Box 830
Fallon, Nevada 89406

Thomas Robert Harris
County Executive Director

Eligible voters: 1065

CHURCHILL COUNTY ASC COMMITTEE

Ted deBraga	Chairman
Orval Fowler, Jr.	Vice Chairman
Henry Osgood	Regular Member
Robert Ansotegui	1st Alternate
Donald Weishaupt	2nd Alternate
Charles R. York	Ag. Ext. Agent

CLARK-NYE COUNTY ASCS OFFICE

Federal Building, Room 1-634
 300 Las Vegas Boulevard, So.
 Las Vegas, Nevada 89101

James I. Lee
 County Executive Director

Eligible voters: 265

CLARK COUNTY ASC COMMITTEE

Donald G. Whitney	Chairman
Paul M. Ozaki	Vice Chairman
H. Merrill Bunker	Regular Member
Dee M. Hughes	1st Alternate
Max Hafen	2nd Alternate
Ferren W. Bunker	Ag. Ext. Agent

NYE COUNTY ASC COMMITTEE

Gerald H. Sharp	Chairman
Glenn C. Brady	Vice Chairman
Robert Owens	Regular Member
Earl Burson	1st Alternate
Robert Madsen	Extension Area Agronomist

Eligible voters: 196

GARDNERVILLE ASCS OFFICE

Valley Professional Center
 P. O. Box 517
 Minden, Nevada 89423

Roy C. Womack
 County Executive Director

Eligible voters: 206

DOUGLAS COUNTY ASC COMMITTEE

John Indiano	Chairman
Budd F. Dressler	Vice Chairman
Andre Aldax	Regular Member
Chris J. Cordes	1st Alternate
Carl Kidman	2nd Alternate
Gail G. Munk	Ag. Ext. Agent

ORMSBY COUNTY ASC COMMITTEE

Eva R. Lompa	Chairman
Melvin Hendershot	Vice Chairman
D. A. Andersen	Regular Member
Sam A. Lompa	1st Alternate
Rodney Joost	2nd Alternate
Emory L. Marshall	Ag. Ext. Agent

Eligible voters: 28

ALPINE COUNTY ASC COMMITTEE (Calif.)

Chris H. Gansberg	Chairman
Wilton Neddenriep	Vice Chairman
Richard Wennhold	Regular Member
Fred Gansberg	1st Alternate
Hazel Collord	2nd Alternate
P. Dean Smith	Farm Advisor

Eligible voters: 29

INYO COUNTY ASC COMMITTEE (Calif.)

J. M. Connor	Chairman
Jack Tatum	Vice Chairman
John Lacey	Regular Member
Weldon D. Redmond	1st Alternate
Clark Talbot	2nd Alternate
P. Dean Smith	Farm Advisor

Eligible voters: 89

MONO COUNTY ASC COMMITTEE (Calif.)

K. O. Strosnider	Chairman
Barton Fulstone	Vice Chairman
Lyle Silvester	Regular Member
Baldo Giorgi	1st Alternate
Ray Charlebois	2nd Alternate
P. Dean Smith	Farm Advisor

Eligible voters: 105

County Executive Director

Eligible voters: 142

WHITE PINE COUNTY ASC COMMITTEE

John Dean Baker	Chairman
Jesse Gardner	Vice Chairman
Van C. Gardner	Regular Member
Neil Larsen	1st Alternate
Vance McKenzie	2nd Alternate
A. Z. Joy	Ag. Ext. Agent

COUNTY OFFICE ADMINISTRATIVE EXPENSES FOR THE 1969 CALENDAR YEAR

Operating funds are provided to county committees by fiscal year. The method used to determine the funds required and the employee staffing needed is based on a workload system in ASCS. This system requires each county office to report the number of units accomplished for the past reporting year. The cost of performing these units is determined for the past year. An estimate is made to determine the number of units to be performed in the coming year. The average cost of each weighted workload unit is then used to determine the funds and staffing needed in the next fiscal year. Weights for workload units are determined by 160 county offices selected in 48 states to report the time used to complete a unit indicator for each program.

Initial allocations issued to county committees are adjusted where the indicated workload is insufficient for county committee and office operations.

Three California county committees (Alpine, Inyo and Mono) are administered by the Gardnerville ASCS Office. Administrative expenses listed are grouped for each county office. Multiple county committee offices show expenses incurred by each county committee.

Tabulating committee elections for five committees. Left to right: K. Strosnider & L. Silvester, Mono County; M. Connors, Inyo County; Roy Womack, CED; B. Dressler, Douglas County; G. Harker, GPA; E. Lompa, Carson City County; C. Gansberg, Alpine County.

THE 1969 AGRICULTURAL CONSERVATION PROGRAM

The Agricultural Conservation Program encourages farmers and ranchers to carry out needed soil, water, woodland and wildlife conservation practices. Through this voluntary program, the Federal government shares with the private land owner, the cost of carrying out the needed conservation measures. The objective of this program is to insure a productive agricultural industry and better environment for future generations.

The Agricultural Conservation Program has long led the way in the abatement of pollution of and from our agricultural lands. The numerous erosion control structures and acres of grass and trees planted under the program have played the major part in helping keep our streams and rivers clean and our air fresh. Drainage projects have removed polluted ground water to provide a clean environment free of disease and insects. New practices are continually being developed under the program to aid in the accelerated fight against air and water pollution.

Everyone, rural and urban people alike, gain from the conservation practices offered under ACP. In addition to pollution abatement, the ACP offers livestockmen assistance for range improvement practices such as cross fencing, grass seeding and livestock water facilities. It provides practices such as land leveling, ditch lining, reorganizing irrigation systems and noxious weed control to row crop, hay and grain farmers. It provides more abundant wildlife for sportsmen and naturalists through practices to build reservoirs, farm ponds, shallow water areas and to produce food and habitat for fish and wildlife. Beautification conservation practices provide scenery appealing to the traveler's eye.

The Agricultural Conservation Program is a partnership in conservation. This partnership is helping to provide future generations with a productive agricultural industry and a clean environment.

1969 ACP EMERGENCY CONSERVATION MEASURES

The regular Agricultural Conservation Program is supplemented by P. L. 85-58. This law authorizes the Secretary of Agriculture to assist farmers and ranchers who perform emergency conservation measures to restore farmland damaged by flood, fire, wind, drought, or earthquake. Cost-sharing, up to 80 percent, is authorized for applying measures needed to restore the land's productivity. In addition to cost-sharing, technical assistance is also provided to producers through transfer of ACP funds to the Soil Conservation Service for their technical services.

In 1969 Clark, Humboldt, Washoe, and White Pine Counties were declared flood disaster areas. P. L. 85-58 funds were provided to assist farmers in these counties to restore damaged irrigation systems, relevel land, remove debris, rebuild reservoirs, and repair and protect streambanks, and clean stream channels. This emergency program was made necessary because of heavy winter snows and excessive spring runoff.

1969 FEED GRAIN PROGRAM

For the first time since 1966, barley was considered as a feed grain for program purposes. Barley, corn and grain sorghum made up the three feed grains included in the program.

To take part in the 1969 program, producers were required to divert to a conserving use, an acreage equal to 20 percent of the farm feed grain base. Producers with bases of 25 acres or less could divert any portion up to the base for payment. On farms with feed grain bases of between 25 and 125 acres, producers could elect to have bases temporarily reduced to 25 acres. The entire temporarily reduced base of 25 acres could then be diverted for payment. Other farms could divert up to 50 percent of their feed grain bases for payment. The diversion payment was based on 50 percent of the price support times the yield times the acres diverted.

Price support payments were made on acreage planted to feed grains which did not exceed the farm base less the acres intended for diversion. The price support payment was computed by multiplying the acres credited for price support by the farm projected yield by the applicable rate: corn, 30 cents per bushel; grain sorghum, 29.68 cents per cwt; and barley, 20 cents per bushel.

Price support loans and purchases were available to producers who qualified for price support payments. The rates for Nevada were \$1.46 per cwt for grain sorghum; \$1.27 per bushel for corn and 88 cents per bushel for barley.

Data for feed grain bases and farms, and program participation and payments are shown on the following pages.

1969 WHEAT PROGRAM

The 1969 voluntary wheat program offered diversion payments, marketing certificates, and price support loans to participating producers. It also provided for the substitution of wheat for feed grain by growers taking part in both programs. Producers could establish oat-rye bases for the purpose of substituting wheat if their farms had a production history of these crops. Producers could also plant in excess of their allotments, up to 150 percent, and store the excess production under bond.

Farmers taking part in the 1969 program were required to divert to a conserving use an acreage equal to 15 percent of their allotment. No payment was made on this mandatory diversion. Producers could elect to divert additional wheat allotment acreage from production for payments. Farms with effective allotments of 21 acres or less could divert the entire allotment. Farms with larger allotments could divert up to 50 percent of such allotments. Diversion payments were made on the acreage diverted in addition to the minimum 15 percent requirement times the farm projected yield times \$1.22. Producers participating in the program and planting wheat within their permitted acreage, received marketing certificates. The certificates were based on 100 percent of parity as of July 1, 1969, less the price support loan level of \$1.25 per bushel. For 1969 the certificates were valued at \$1.52 per bushel. Marketing certificates were based on the projected production of the smaller of 43 percent of the allotment or the planted acreage times \$1.52 per bushel.

Price support loans of \$1.22 per bushel were available to producers for their entire farm production.

1969 wheat program data and payments are shown on the following page.

REFERENDA

Two referenda were held in Nevada during the 1969 program year. Referenda are conducted to determine if producers favor certain mandatory ASCS programs and program provisions. A mandatory program and program provision cannot be put into effect without the approval of at least two-thirds of the producers voting in a national referendum.

Upland Cotton Marketing Quotas. In December 1968, a referendum was held to determine if cotton farmers favored marketing quotas for the 1969 upland cotton crop. Under a quota program, producers are penalized for acreage planted in excess of their effective farm allotment. Voting was done by mail and all producers sharing in the 1968 upland cotton crop or having a 1968 upland cotton allotment were eligible to vote. Results of the referendum were:

COTTON MARKETING QUOTA REFERENDUM

COUNTY	YES VOTES	NO VOTES	CHALLENGED VOTES	TOTAL VOTES	% YES VOTES
Clark	1	0	0	0	100
Nye	18	1	2	21	95
TOTAL	19	1	2	21	95.0

Allotment Transfers. In May of 1968, a referendum was held to determine if producers favored permitting "out of county" transfers of upland cotton allotments. A two-thirds favorable vote would allow producers to sell or lease their cotton allotments to farmers in other counties within the same State. Results of this referendum were:

COTTON ALLOTMENT TRANSFER REFERENDUM

COUNTY	YES VOTES	NO VOTES	CHALLENGED VOTES	TOTAL VOTES	% YES VOTES
Clark	1	0	0	1	100
Nye	13	7	0	20	65
TOTAL	14	7	0	21	66.6

As a result of this referendum, producers in Clark County may transfer upland cotton allotments to Nye County producers by sale or lease. Producers in Nye County may not transfer allotments by sale or lease to producers in other counties.

1969 UPLAND COTTON PROGRAM

In 1969, the upland cotton program aimed at larger production than in recent years because cotton surpluses had been reduced to a workable level. As a result, no diversion payments or requirements were included in the 1969 program.

Growers signed up under the 1969 upland cotton program could plant their entire effective cotton allotment. Price support payments were made to producers on the smaller of the acreage planted to cotton or the farm domestic allotment. The domestic allotment is 65 percent of the effective farm allotment. The price support payment was 14.73 cents per pound times the projected farm yield times the domestic allotment or planted acreage.

Price support loans were also available to program participants for their entire cotton production. Individual loan rates were based on the national average loan rate of 20.25 cents per pound for middling 1-inch cotton at average location.

Marketing quotas were voted into effect for 1969 by cotton growers. With quotas in effect, producers were penalized for cotton acreage planted in excess of their allotments. In 1969, there was no excess cotton planted or marketing penalties assessed in Nevada.

Under the program, producers could transfer allotments to other producers by sale or lease. Growers could also release their allotments to the COC. In turn, released cotton acreage can be apportioned to other growers requesting additional acreage.

Data for county allotments, transfers by sale or lease, release and reapportionments, and program participation and payments are shown on the following pages.

1969 PRICE SUPPORT PROGRAMS

Operations of the United States Department of Agriculture to stabilize prices and production of certain agricultural commodities are referred to as price support programs. Price support operations are conducted by the Commodity Credit Corporation and activity at the county level is handled by ASC county committees. Price support may be obtained in one of two ways -- loans and purchases or payments.

PRICE SUPPORT LOANS AND PURCHASES

Loans support prices in two major ways: (1) providing farmers with a cash return for the commodity, and (2) strengthening market prices of the commodity through withdrawal of supplies from the market. Price support loans are available to producers for wheat, corn, grain sorghum, barley, oats, honey and many other commodities not produced in Nevada.

The loan method of support gives the farmer an opportunity either to market his crop or keep it under loan. If the market price rises above the loan level, plus charges, he has the privilege of paying off the loan and selling his commodity in the open market. If the price fails to rise above the loan level, however, the nonrecourse character of the loan agreement makes it possible for him to deliver the commodity to Commodity Credit Corporation instead of repaying the loan.

PRICE SUPPORT PAYMENTS

The payment method of support was used for shorn wool and unshorn lambs. The National Wool Act of 1954, as amended, provides incentive payments to wool growers to encourage the annual domestic production of 300 million pounds of wool. The Congress of the United States recognizes wool as an essential and strategic commodity not produced in sufficient quantity in our Nation.

The rate of payment for wool was the percentage figure required to bring the national average price of wool received by all producers up to 69 cents per pound of shorn wool. The national average marketing price for wool was 41.8 cents per pound on a grease basis, up 1.3 cents per pound from 1968. The payment rate was 65.1 percent of the average marketing price.

Under the Act, a support price is established for unshorn lambs. A payment on unshorn lambs is made to avoid unusual shearing of lambs for slaughter in order to obtain payments for shorn wool. This gives the producer essentially the same net returns that he would have received had he sheared the lambs and obtained a shorn wool payment. The payment rate for unshorn lambs was \$1.09 per cwt. in 1969.

COMPLIANCE

The success of all ASCS farm programs depends on participants complying with program regulations and acreage requirements. ASC county committees and office personnel have the responsibility of determining program compliance.

ACP Spot Checks: ASC county committees determine compliance on all conservation practices under the Agricultural Conservation Program for which the Soil Conservation Service or Nevada Division of Forestry is not assigned the technical responsibility. A minimum of 5 percent of these practices must be spot checked by ASCS personnel. ASCS representatives are also responsible for insuring that all ACP conservation practices are maintained in accordance with program policy. Vendors providing conservation materials and services are also subject to spot checks.

Compliance by Certification: The farm certification program was approved in 4 counties during the 1969 program year. Churchill, Humboldt and Pershing counties were approved for wheat and feed grain; Nye County was approved for cotton, feed grain and wheat. The responsibility for complying with bases, allotments, and diverted acreage lies with the farmer. The farmer has the responsibility of reporting to the county office his acreages and other program compliance provisions. County office personnel spot check 25% of the reporting farms to insure program provisions are met.

Regular Compliance: In counties not approved for the certification program, county office employees completed the compliance work. Visits were made to each farm participating in a program and reporters measured wheat, feed grain, cotton, and diverted acreages.

Measurement Service: In 1969 measurement service was offered in all Nevada counties. This service includes measuring and staking areas before planting, measurement of land after planting, or measurement for any program the farmer requests. Measurement service assures the participant that program acreage provisions will be met, and eliminates the need for acreage adjustments after planting.

The entire cost of the measurement service is paid for by the producer. Measurement service is very important to producers in counties approved for the farm certification program.
